### **FIXING INSTRUCTIONS FOR FIBROUS PLASTER CORNICE**

1. Take a small off-cut of cornice. Hold it square in the fixed position in each corner of each wall marking the position of the cornice as you do so.
2. Spring a chalk line corner to corner to show the line of fixing.
3. Start fixing the cornice from each mitre using adhesive and non-rust countersunk screws.
4. To strengthen mitres and butt joints tamp in a piece of plaster soaked cotton or hessian scrim.
5. Make good the joints, mitres and top and bottom sections of the cornice with fine casting plaster.
6. Mitres can be cut using either a carpenters mitre box or by cutting with a saw having worked out the angle.
7. For Clients who are unsure about fixing we offer a full fixing service.
